

## Fullerene C60

Water-soluble

### Description

**Fullerene C60** is the primary starting material for the synthesis of organic semiconductors used in solar cells, perovskites, and bio/pharma applications.

**High purity Fullerene-C60** (carbon 60, or C60, fullerenes) for use in thermal evaporation systems as either electron acceptors, n-type semiconductors, or interface layers.

We do offer regular grades which may contain traces of volatiles (solvents) as 99.50% - 99.90%. **High purity solvent-free C60** is also offered as 99.50%+ to 99.99%+ grades, specially formulated for biological oriented R&D and processes demanding ultra-pure fullerenes.

Our C60 fullerene is packed and shipped into high-quality glass amber vials under nitrogen.

### Fullerene C60 SOL5060

Available from **g level** (for R&D, Tech centers and universities) to **kg level** (for industrial developments).

#### REGULAR GRADES:

**Grade 99.5% (SOL5060A)**  
**Grade 99.90% (SOL5060Z)**

#### SOLVENT FREE GRADES:

**Grade 99.5% (SOL5060X)**  
Solvent-free\*  
**Grade 99.90% (SOL5060W)**  
Solvent-free\*   
**Grade 99.95% (SOL5060Y)**  
Solvent-free\*   
**Grade 99.99% (SOL5060YY)**  
Solvent-free\* 

\*  These C60 products are going through further process in order to be highly soluble in organic solvents, oils and other related medias.

\* Solvents and volatiles are removed by subjecting the C60 to a controlled heat-cool process under dynamic inert medical nitrogen in order to suppress oxidation and preserve its pristine nature.

Green  
chemistry

Environmentally  
friendly

SUSTAINABILITY is at the core of what we do and our engine for growth, which is why we prioritize the use of GREEN CHEMISTRY, avoid wastes, recover and recycle solvents and materials as much as possible and use renewable hydro-electrical energy to power our operations.

## Fullerene C70

Water-soluble

### Description

**Fullerene C70**, is the main starting material for the synthesis of organic semiconductors used in solar cells, perovskites, and bio/pharma applications.

**Highly pure solvent-free C70** is offered in grades ranging from 99.0% to 99.5%, specially formulated for biological oriented R&D and processes demanding ultra-pure fullerenes.

Solvents and volatiles are removed by subjecting the C70 to a controlled heat-cool process under dynamic, inert medical nitrogen to suppress oxidation and maintain its originality.

### Is used as:

- Organic photovoltaics (OPV).
- Water purification.
- Biohazard protection.
- Medical researches.
